Office Action Summary

Application No.

10/779,893

Applicant(s)

XENAKIS ET AL.

Examiner

Roberta A. Shand

Art Unit

2616

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 17 February 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1.2 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-20 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over the admitted prior art in view of Stanforth (U.S. 6961575 B2).

3. Regarding claim 1, the admitted prior art teaches (fig. 1) in a communication system a method for routing bearer traffic between a 3G network and a 2G network, the method for routing bearer traffic comprising the steps of: determining by a first network a local gateway in proximity to a calling party.

4. The admitted prior art does not teach sending the bearer traffic by the first network to the local gateway; and directly routing the bearer traffic to a second network in proximity to a called party.

5. Stanforth teaches (fig. 17) sending the bearer traffic by the first network to the local gateway; and directly routing the bearer traffic to a second network in proximity to a called party. It would have been obvious to one of ordinary skill in the art to adapt this to the admitted prior art to ensure quality of service within the system (col. 11, lines 55-60).

6. Regarding claims 2 and 12, Stanforth teaches (col. 11, lines 55-65) there is further included a step of determining a location of the called party.

7. Regarding claims 3 and 13, the admitted prior art teaches the first network includes the 2G network currently serving the calling party.

8. Regarding claims 4 and 14, the admitted prior art teaches the second network includes the 3G network currently serving the called party.

9. Regarding claims 5 and 15, the admitted prior art teaches the first network includes the 3G network currently serving the calling party.

10. Regarding claims 6 and 16, the admitted prior art teaches the second network includes the 2G network currently serving the called party.

11. Regarding claims 7 and 11, Stanforth teaches (col. 11, lines 55-65) the step of directly routing the bearer traffic includes a step of inhibiting transmission of the bearer traffic to a home gateway, if the calling party is roaming (Stanforth teaches selected a gateway based on distance which means if the party is roaming the home agent wont be selected therefore inhibiting transmission to the home gateway).

12. Regarding claims 8, 17 and 20, the prior art teaches routing the bearer traffic from the local gateway through an inter-connect network between the first and second networks to the called party.

Art Unit: 2616

13. Regarding claim 9, the admitted prior art teaches (fig. 1) a method for routing bearer traffic between a first network and a second network, the method for routing bearer traffic comprising the steps of: determining by the first network a local gateway in proximity to a calling party;

14. The admitted prior art does not teach directly routing the bearer traffic to the second network in proximity to a called party.

15. Stanforth teaches (fig. 17) directly routing the bearer traffic to the second network in proximity to a called party. It would have been obvious to one of ordinary skill in the art to adapt this to the admitted prior art to ensure quality of service within the system (col. 11, lines 55-60).

16. Regarding claim 10, Stanforth teaches (fig. 17) there is further included a step of sending the bearer traffic by the first network to the local gateway.

17. Regarding claim 18, the admitted prior art teaches (fig. 1) a method for routing bearer traffic between a first network and a second network, the method for routing bearer traffic comprising the steps of: determining by the first network a local gateway in proximity to the calling party.

18. The admitted prior art does not teach if a calling party is roaming, determining by the first network a local gateway in proximity to the calling party; sending the bearer traffic by the first network to the local gateway; and determining a location of a called party.

Art Unit: 2616

19. Stanforth teaches (fig. 17) if a calling party is roaming, determining by the first network a local gateway in proximity to the calling party (Stanforth teaches selected a gateway based on distance which means if the party is roaming the home agent wont be selected therefore inhibiting transmission to the home gateway); sending the bearer traffic by the first network to the local gateway; and determining a location of a called party. It would have been obvious to one of ordinary skill in the art to adapt this to the admitted prior art to ensure quality of service within the system (col. 11, lines 55-60).

20. Regarding claim 19, Stanforth teaches (fig. 17) directly routing the bearer traffic from the local gateway to the second network in proximity to the called party.

Conclusion

21. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Roberta A. Shand whose telephone number is 571-272-3161. The examiner can normally be reached on M-F 9:00am-5:30pm.

22. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Huy Vu can be reached on 571-272-3155. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 2616

23. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
